<sup>1</sup> Amperage values are for each pump.

<sup>2</sup> Electrical service shall be sized to support all pumps running simultaneously.

## **Q4884LSG/LSGX-Series Specifications**

1.01 G	ENERAL				
The contr	ractor shall provic herein. The pump		ication are LSG	J/LSGX-Series single/thr	(QTY) centrifugal grinder pumps as ree-phase grinder pumps. The pump ctured by Liberty Pumps.
2.01 O	PERATING CON	IDITIONS			
		all be rated at 2 hp, feet of total dynamic head.	volts,	phase, 60 Hz, 3450	RPM. The unit shall produce
pumped of 1	over long distance	es in pipelines as small as 1.25"	in diameter. Th eet of total dyr	ne LSG-Series single stagnamic head. The LSGX-S	inding it to a fine slurry enabling it to be ge submersible pump shall have a shut-off series two stage submersible pump shall ead.
3.01 C	ONSTRUCTION				
Bergen N shall not with a Bur cord entry shall be p	IY. The castings she considered equal of the considered equal of the considered equal of the least the lea	nall be constructed of class 25 of ual since they do not properly asteners exposed to the liquid ed pins to conduct electricity of	cast iron. The n dissipate heat shall be stainle eliminating the ngement. The fi	notor housing shall be of from the motor. All ma ss steel. The motor shal ability of water to ente irst seal is a double lip s	umps as manufactured by Liberty Pumps, bil filled to dissipate heat. Air filled motors ting parts shall be machined and sealed I be protected on the top side with sealed r internally through the cord. The motor eal molded in fluoroelastomer or Buna-Naings and spring.
handle th be of the bearings.	ne downward axia concentric desig Additionally ther	thrust produced by the impell n thereby equalizing the pressu	ler and cutters ure forces insid ousing volute in	by design of angular co e the housing which wi	ring shall have the additional ability to ntact roller races. The pump housing shall Il extend the service life of the seals and e entrapment of flowing debris. The pump

The pov able shall not e d plate assemb	ver cord shall be sized for nter the motor housing ly, with molded pins to	pe cord type SJOOW (1-phase) or SEOOW or the rated full load amps of the pump in directly but will conduct electricity to the conduct electricity. This will eliminate the
5.01 M	IOTORS				
			•	•	nce air filled motors are not capable of ng temperature shall not exceed 105°C for

thermal overload switch in the windings for protecting the motor.

model LSG and 135°C for LSGX models (unsubmerged). Single-phase motors shall be capacitor start/capacitor run and have an integral

#### 6.01 BEARINGS AND SHAFT

An upper radial and lower thrust bearing shall be required. The upper bearing shall be a single ball/race type bearing. The lower bearing shall be an angular contact heavy duty ball/race type bearing, designed to handle axial grinder pump thrust loads. Both bearings shall be permanently lubricated by the oil, which fills the motor housing. The bearing system shall be designed to enable proper cutter alignment from shut off head to maximum load at 10 feet of TDH. The motor shaft shall be made of 300 series stainless steel and have a minimum diameter of 0.670".

#### 7.01 **SEALS**

The pumps shall have a dual seal arrangement consisting of a lower and upper seal to protect the motor from the pumping liquid. The lower seal shall be fluoroelastomer OR Buna-N molded double lip seal, designed to exclude foreign material away from the main upper seal. The upper seal shall be a unitized silicon carbide hard face seal with stainless steel housings and spring equal to Crane Type T-6a. The motor plate/housing interface shall be sealed with a Buna-N O-ring.

#### IMPELLER 8.01

The impeller shall be an investment cast stainless steel impeller, with pump out vanes on the back shroud to keep debris away from the seal area. It shall be keyed and bolted to the motor shaft.

#### **CUTTER MECHANISM** 9.01

The cutter and plate shall consist of 440 stainless steel with a Rockwell C hardness of 55-60. The stationary cutter plate shall have specially designed orifices through it, which enable the slurry to flow through the pump housing at an equalized pressure and velocity. The stationary cutter shall consist of V shapes to maximize cutting action and arc shape exclusion slots to outwardly eject debris from under the rotary cutter. The rotary cutter shall have (4) blades and be designed with a recessed area behind the cutting edge to prevent the accumulation and binding of any material between rotary cutter and the stationary cutter. The cutting system must incorporate close tolerances for optimum performance. Ring or radial cutters, or those that grind on the outside circumference, shall not be considered equal.

## 10.01 CONTROLS

The pumps shall be controlled with a NEMA 4X outdoor quadplex control panel with six float switches and a high water alarm.

### 11.01 PAINT

The exterior of the casting shall be protected with powder coat paint.

## 12.01 SUPPORT

The pumps shall have cast iron support legs, enabling it to be a freestanding unit. The legs will be high enough to allow solids and long stringy debris to enter the cutter assembly.

### 13.01 SERVICEABILITY

Components required for the repair of the pump shall be shipped within a period of 24 hours.

### 14.01 FACTORY ASSEMBLED TANK SYSTEMS WITH GUIDE RAIL AND QUICK DISCONNECT DISCHARGE

Factory mounted guide rail system with pump suspended by means of bolt-on guick disconnect which is sealed by means of nitrile grommets. The discharge piping shall be schedule 80 PVC and furnished with a check valve and PVC shut-off ball valve. The tank shall be wound fiberglass, and an inlet hub shall be provided with the system.

## **15.01 TESTING**

The pumps shall have a ground continuity check and the motor chamber shall be hi-potted to test for electrical integrity, moisture content and insulation defects. The motor and volute housing shall be pressurized, and an air leak decay test is performed to ensure integrity of the motor housing. The pump shall be run, voltage current monitored, and checked for noise or other malfunction.

## 16.01 QUALITY CONTROL

The pumps shall be manufactured in an ISO 9001 certified facility.

### 17.01 WARRANTY

Standard limited warranty shall be 3 years.
