

## Dräger Panorama Nova® Full Face Mask

The Panorama Nova® full face mask has been successful in the market worldwide for decades and provides reliable and secure protection. In combination with a compressed air breathing apparatus or re-breather, it is used as a tried and tested face piece by firefighters and in mining.

ST-465-2000

## Benefits

---

### Comfortable fit combined with double sealing line

Features a double sealing line for maximum safety which adapts well to different head and face shapes

---

### Many different uses

With the different connection piece options, the Panorama Nova® can be used as a standard or an overpressure mask for filters, compressed air breathing apparatus, airline systems, as well re-breathers for firefighters, mining, or in industrial applications.

---

### Robust and durable

For decades the mask has fared well in any extreme or rough condition in which the different target groups and user groups (industry, firefighters and mining) operate.

---

### System integration

With the option to choose a mask with different connections and wearing systems, as straps or helmet adapters, it will fit perfectly into the system, consisting of helmet, mask, and respiratory system (compressed-air breathing apparatus, closed-circuit breathing apparatus or filter).
