CROSS REFERENCE: DHSI # CS 36 x AMU-3

INSTRUCTIONS: Available upon request (and on website).

CAD DRAWINGS: Available upon request (and on website).

PROFILE DRAWINGS: Available upon request (and on website).

CUT SHEET: Available upon request (and on website).

OVERVIEW: The 2173_V features the V94BL insert. This insert has three flexible fins that are alternately notched. This configuration allows HVAC systems and bathroom fans to circulate air under the door and still block light and noise.

FEATURES (COMPETITIVE ADVANTAGES):

- Pemko's 2173_V features a slotted aluminum channel which allows for adjustability.
- Pemko's 2173_V Door Shoe provides a sturdy aluminum surface on the face of the door to protect the bottom of the door from damage.
- Pemko's 2173_V alternately notched vinyl door shoe allows HVAC systems and bathroom fans to circulate air under the door and still block light and noise.

BENEFITS:

- Pemko's 2173_V vinyl insert can be easily replaced if necessary.
- Pemko's 2173_V is available with black vinyl in four aluminum finishes to coordinate with other hardware on the door.
- Pemko's 2173_V Door Shoe vinyl is soft and pliable which allows for ease in sealing against a threshold and allowing the door to close with minimal pressure.
- Combine S773_ with 2173_V for a complete hospitality package.

APPLICATIONS: Although originally designed for hotel room doors, this door shoe is ideal in any situation where airflow under the door is necessary, but privacy and light leakage are also a concern.

TYPICAL INSTALLATION: Pemko's 2173_V slips snugly onto the bottom of the door and attaches with #6 x 5/8" stainless steel screws. The aluminum flange comes with elongated slots to allow for adjustability once positioned on the door.
