

## Specifications

<b>Product</b>	BP-46 and BP-46-230 Condensate Pump
<b>Application</b>	High Temperature/High Performance Condensate Pump
<b>Purpose</b>	The DiversiTech Boiler Pump is designed to automatically remove the water produced by condensing furnace and boilers that produce high temperature condensate. Can also be used for air conditioning evaporation coils, especially when high lift is required. These pumps can also be used for other types of fresh water removal from refrigeration equipment, dehumidifiers, water dispensers, etc. where gravity drainage is impossible.
<b>Advantages</b>	With a 1 gallon tank, this pump is constructed from a heat resistant plastic and can handle water temperatures up to 212°F. This pump incorporates thermal overload protection and a independent high level alarm switch / boiler interlock. The check valve to prevent condensate flowing back into the pump and odours from drain pipes.
