

CIRRUS™ WIND INDICATOR

& Replacement Cartridges

Battery lasts 30-hours on a single charge

Over 1,000 puffs per cartridge

Easy USB recharging - charging cord included

The patent pending Cirrus™ Wind Indicator is the newest test instrument to be distributed exclusively by Supco for evaluating air flow and direction, air leakage and draft indication. Used in place of traditional smoke pens, Cirrus creates vapor to show airflow rather than a flammable end.

It is suitable for many residential and commercial HVACR applications where airflow, air leakage and draft need to be verified; such as near registers, return air, ductwork & more.

It's a great tool for contractors to have on hand and they also may enjoy its crossover uses such as hunting and golf.

Product Specifications

Part No	Description
CWI100	Wind Indicator Unit. Includes cartridge, charging cord and lanyard.
CRC2NC	2PK Replacement Cartridge
