

Danze

Shower System Design Guide

Create Your Own Unique Design

At Danze, we believe showering should be more art form, and less routine. So, choose your palette and create your own unique design. Relaxing. Invigorating. Simple. Complex.

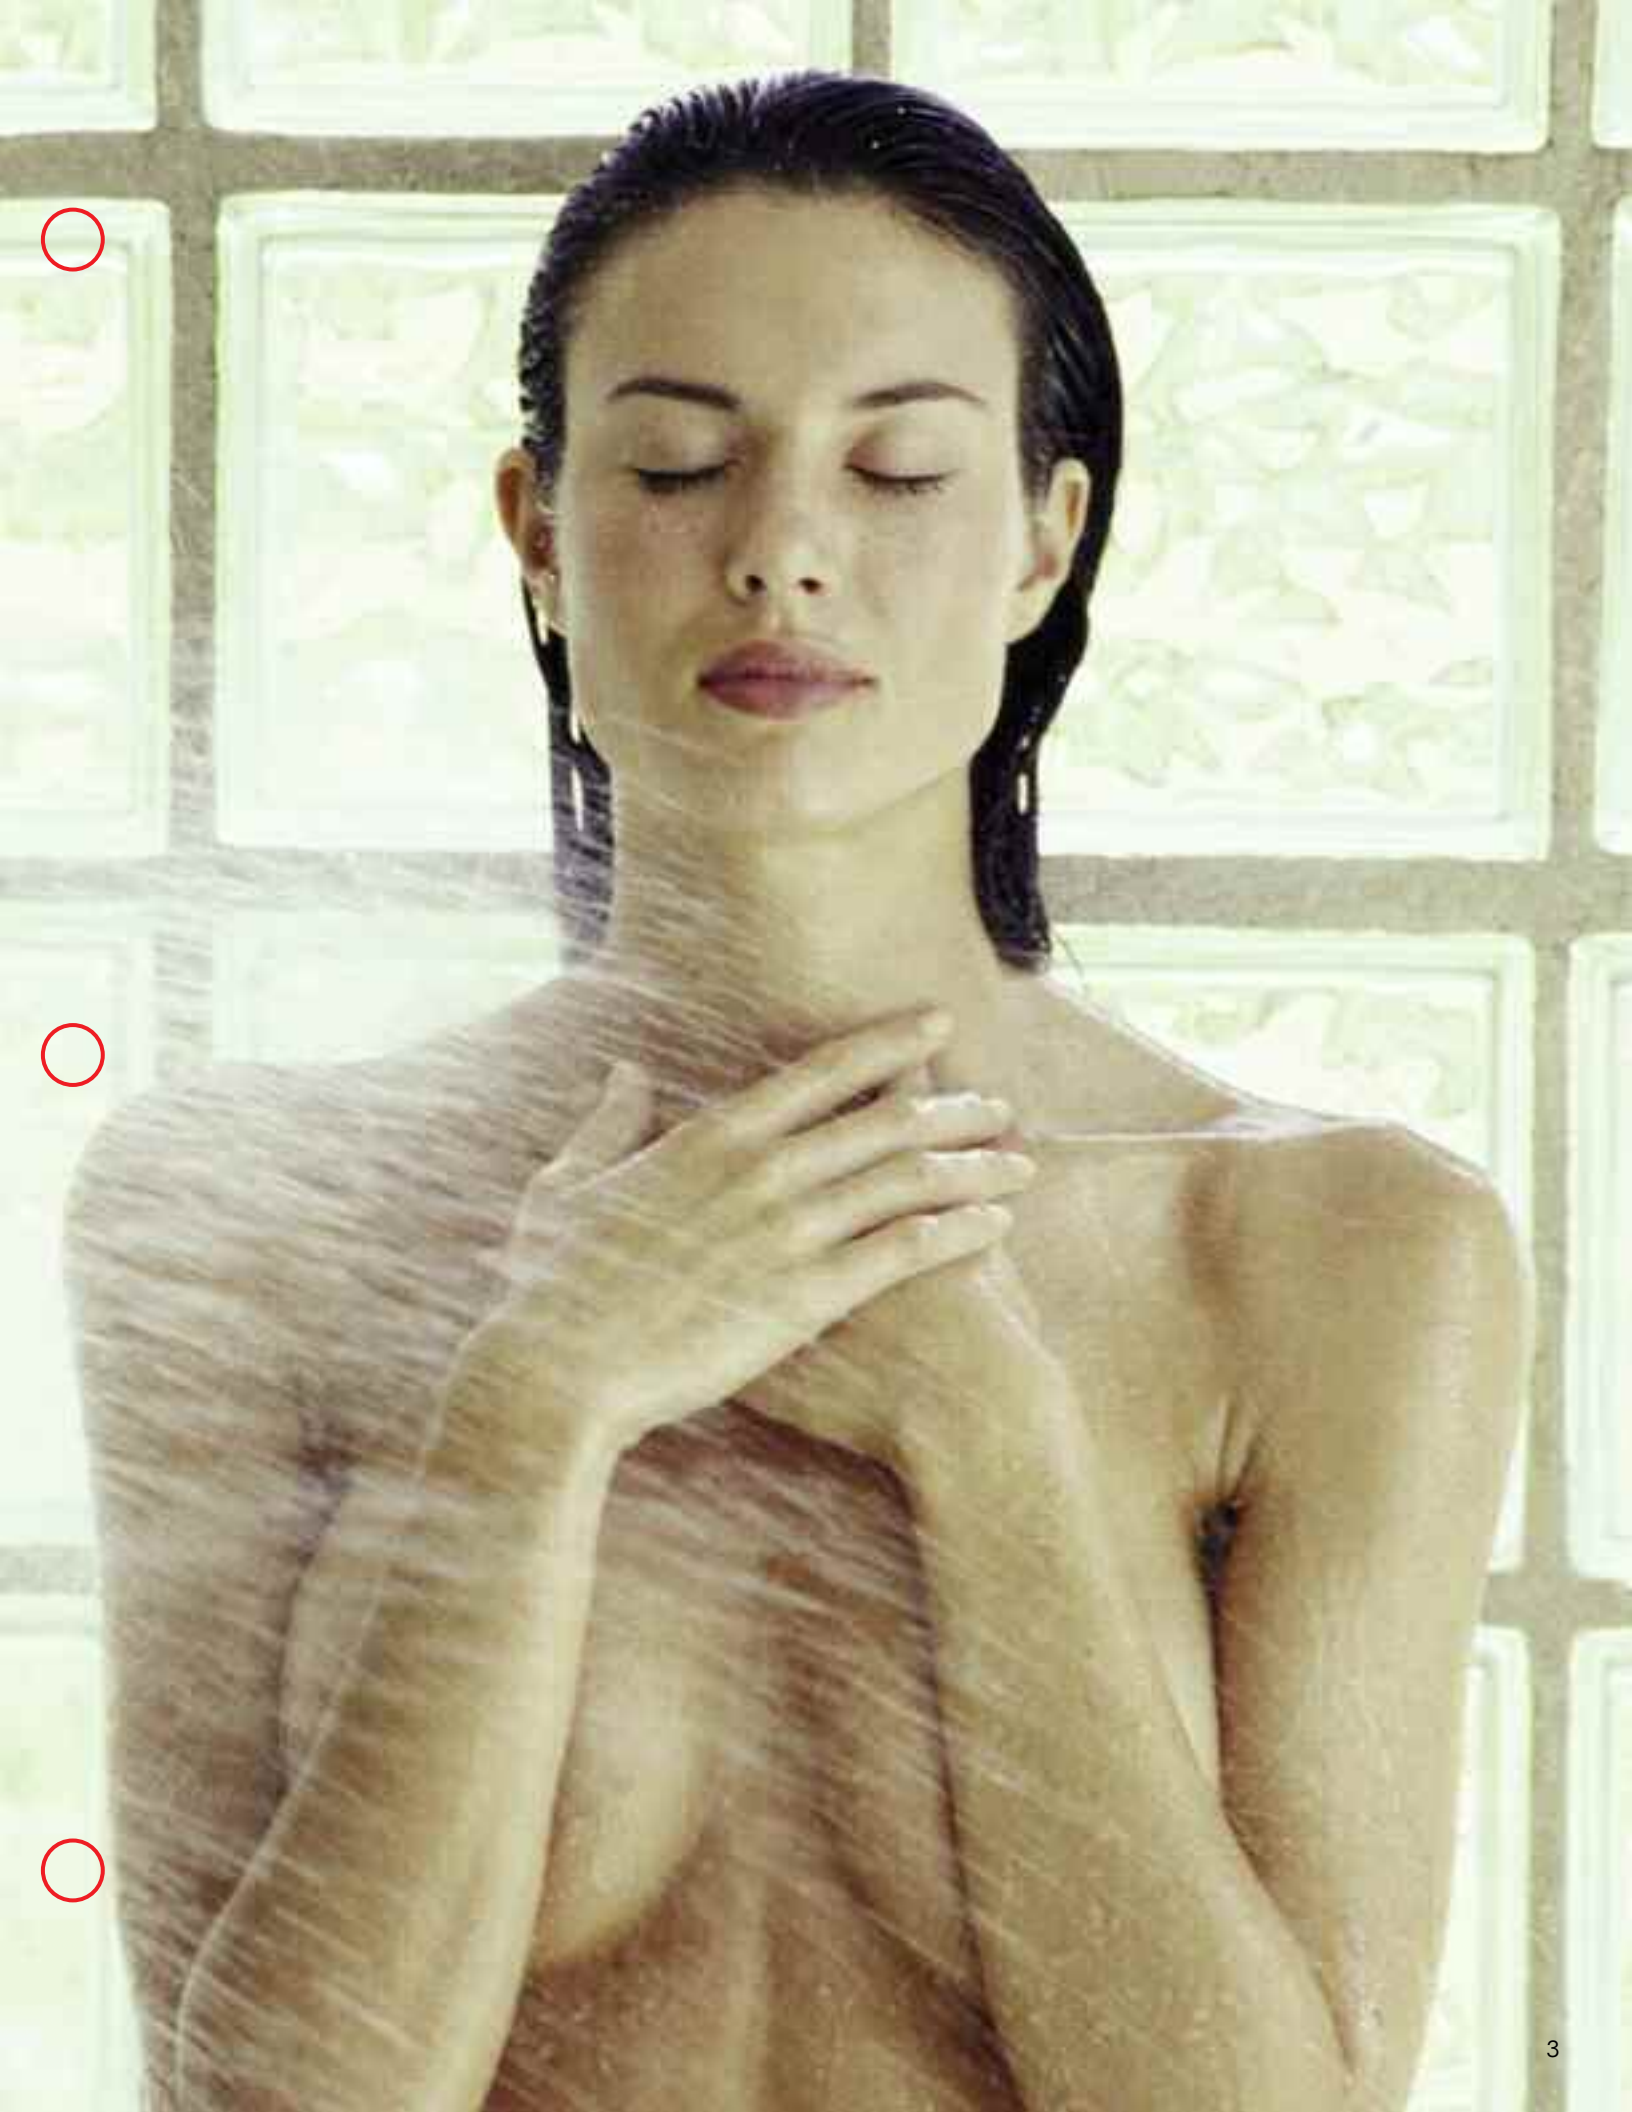

Make a personal statement with an endless combination of design choices. 16 collections, 10 finishes, 15 trim styles, 32 showerheads and a myriad of shower accessories designed to perfectly complement our faucet collection.

Behind the wall Danze provides innovative engineering that is seamless, functional and worry-free. Choose from three high performance valve systems designed to support your unique shower, while providing consistent temperature and water flow rates.

Danze®

Design Your Danze Shower System

Danze provides shower system options to meet virtually any design and any budget. Before you start creating your dream, you'll need to assemble some basic information. Danze has developed Shower System Worksheets, featuring diagrams on popular system designs, to help you through the process. Please visit Danze.com for more information.

1. Danze shower products and systems are designed to function with water supply pressure between 20 psi and 80 psi. Optimum water pressure is between 45 psi and 80 psi — so be sure to check with your plumber or local water department.
2. Measure the space - the floor, the walls, the ceiling and diameter of your existing drain.
3. You'll want to make sure you have enough hot water, so write down the size of your existing water heater. Your plumber will size your water heater based on the system selected.
4. List your desired components shower heads, hand held showers, body sprays.
5. Mark down the trim styles and finishes you like best. Choose from Contemporary to Traditional designs.
6. Sit down with your Danze design representative to design your new system.

Be sure to visit our website for a complete selection of decorative plumbing products to complement your new shower system design.

Danze Valve Technology

Danze offers a selection of shower valves to match your unique needs, design and budget. From our 1/2" valves that work easily with your existing plumbing system for an upgraded shower experience, to our 3/4" Thermostatic Valve that can support designs limited only by your imagination, our valves provide a dependable, high performance shower experience.

Each valve is designed to provide a consistent, safe temperature range and water flow across every outlet in your system. Every valve option has been designed to eliminate the risk of scalding. With Danze valve technology, you can design up to a 6 component system with showerheads, body sprays and personal shower systems — you can count on Danze to deliver.

Installation Flexibility

We realize there are a lot of decisions to make with your shower system project — tile, lighting, paint colors. Danze shower systems are engineered to make the design experience as relaxing as the shower experience.

With Danze, you don't have to make a final decision on trim style and finish right away. You can wait until the end of the project. Just determine your basic design and select the appropriate valve system to get the project moving. We have multiple trim styles and multiple finishes for each of our valve platforms, all interchangeable and all designed for a precise fit.

Danze

The Right Valve For The Right Job

Danze offers unsurpassed design flexibility with a selection of shower valves to match your design, budget and plumbing system. From a simple shower upgrade to a multi-outlet, high performance shower experience — Danze has a shower valve engineered to meet your requirements.

The number of shower components specified and how you want to use your shower will determine the right valve for the job. Your Danze design representative can provide valuable advice and assistance in selecting the right system.

We've Really Got You Covered

We engineered our new **3/4" Thermostatic Valve** to provide the convenience of thermostatic technology and highest flow rates (16 gpm @ 45 psi) to work with our most popular design collections.

- Up to 6 shower components for each valve in your shower design¹
- 3/4" valve can be used with 1-4 separate volume controls
- Choose from 8 collections in 8 finishes

With a shower experience that covers every conceivable angle, the only remaining question is, "Who gets to shower first?"

¹ Total component flow rate should not exceed system flow rate (16 gpm @ 45 psi).

An Easy Way To Expand An Existing Shower

Our **1/2" Thermostatic Valve** is easily installed onto standard piping. When combined with our 1/2" diverter valve, it allows you to add a custom touch to your shower design.

- Can use 3 or 4 components when installed with 1/2" thermostatic valve and four port diverter²
- Choose from 7 collections in 6 finishes

You'll wonder why you waited so long to treat yourself to this remarkable shower experience.

² Total component flow rate should not exceed system flow rate (8.25 gpm @ 45 psi).

The Basic Shower, That's Anything But

Our **1/2" Pressure Balance** valve automatically balances incoming hot & cold water pressure to provide a consistent, comfortable temperature. With a flow rate strong enough to support up to two showerheads, it's the perfect choice when you want to take a basic shower to the next level.

- Ideal for single shower, tub/shower combination or shower/handshower combinations³
- Choose from 15 collections in 7 finishes

³ Total component flow rate should not exceed system flow rate (6.0 gpm @ 45 psi).

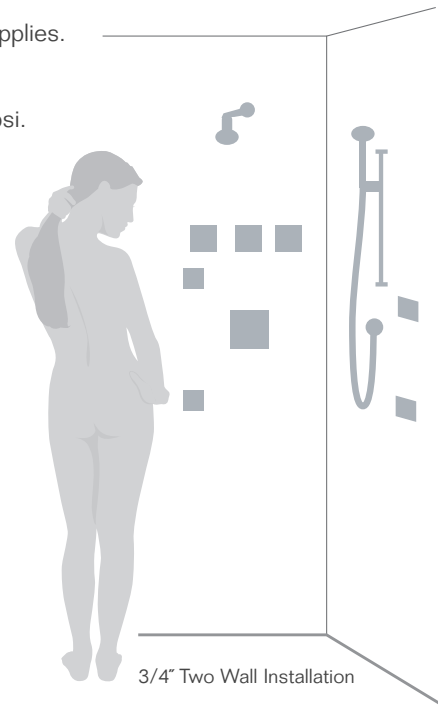

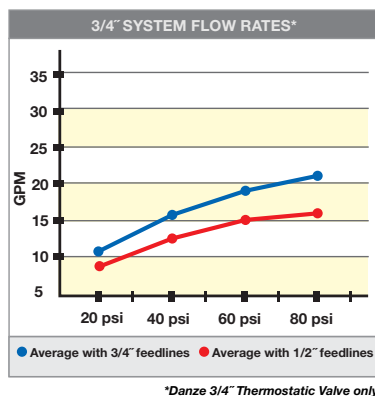

Danze 3/4" Thermostatic with Volume Controls

Our 3/4" Thermostatic Valve system provides the ultimate custom shower experience. Innovative valve design allows you to select a precise temperature for your shower. The system automatically adjusts to fluctuations of the incoming water pressure and temperature to maintain your selected temperature throughout your shower experience, day after day.

Individual volume controls allow you to control the flow rate to each of the outlets within your shower system. You have individual control of water flow to your showerhead, handshower and body sprays.

Our 3/4" thermostatic system is designed for 3/4" and 1/2" water supplies. It can support up to 6 shower components* including showerheads, personal shower systems and body sprays providing 16 gpm @ 45 psi.

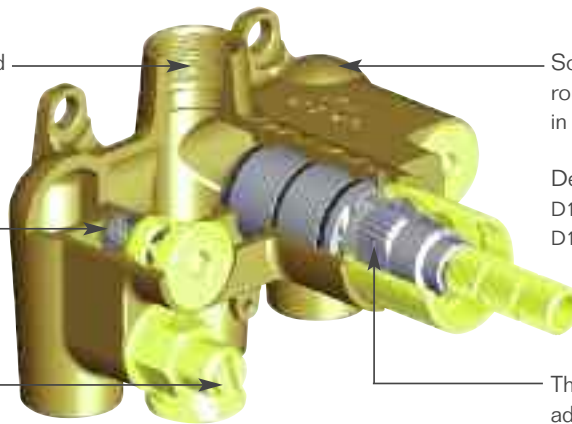

*This assumption is based on each shower component delivering a maximum water output of 2.5 gpm. ($6 \times 2.5 = 15.0$ gpm)

Vertical 3/4" NPT female inlets and outlets allow for a compact design and easy installation

Removable in-line screen helps prevent debris from clogging the cartridge — flushing plugs are included with the valve to make the installation process simple and error free

Screwdriver stop & check valve provides easy access during installation & maintenance

Solid brass body with 13/16" rough-in tolerance, fits easily in 2 x 4 stud wall construction

Deep wall extension kits available:
D155001BT - 3/4" Thermostatic Valve Kit
D135301BT - 3/4" Volume Control Kit

Thermostatic cartridge automatically adjusts to the temperature and pressure of incoming water lines to provide a consistent output temperature

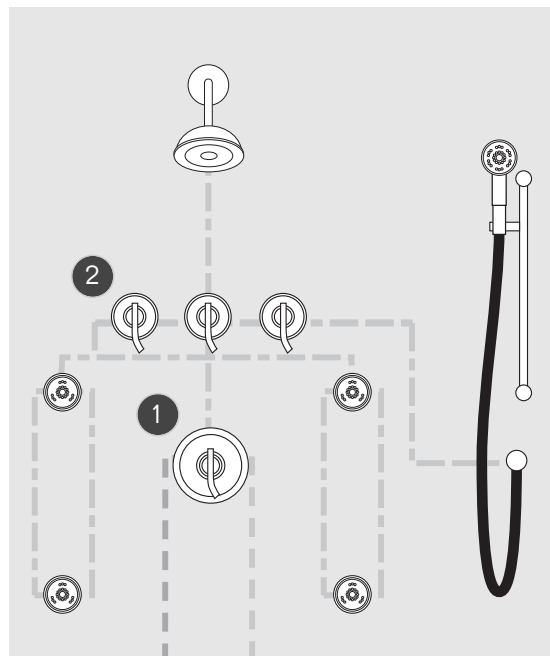

Danze®

Danze 3/4" Thermostatic Valve Setup

Our 3/4" thermostatic system is designed to provide a precise, consistent temperature throughout your shower experience with individual control over each outlet.

A single thermostatic mixing valve can provide 16 gallons per minute at 45 psi to support up to 6 shower components¹. Your system should include a volume control for each showerhead, handshower and bank of body sprays. The images below illustrate the plumbing configuration of a 3/4" 2-wall shower system design.

The Danze 3/4" thermostatic shower system consists of:

- 1 A mixing valve that precisely controls the temperature of the water in your shower
- 2 Individual volume controls that manage the water flow to each outlet

A volume control is required to operate the Danze 3/4" thermostatic valve.

¹. Based on average output/flow of 2.5 gpm for each shower component. Depending on system water pressure and the shower system components selected, the Danze 3/4" shower system may support more or less components.

Danze

3/4" Thermostatic Valve Trim Options

Danze 3/4" thermostatic valve trims are matched to eight popular Danze faucet and bath accessory collections, for a coordinated look throughout the bath.

Danze 1/2" Thermostatic with 4-Port Diverter

Add a touch of luxury to your shower experience with the Danze® 1/2" thermostatic custom shower system. Designed to work with 1/2" piping, our 1/2" thermostatic valve system is a logical upgrade from a standard 1/2" pressure balance valve.

Volume and temperature are controlled by our 1/2" thermostatic valve, while our 4-port diverter directs water flow to each of the outlets within your shower system.

Our 1/2" thermostatic system is designed for 1/2" water supplies and can support up to 3 or 4 shower components including showerheads, personal shower systems and body sprays².

². This assumption is based on each shower component delivering a maximum water output of 2.5 gpm ($3 \times 2.5 = 7.5$ gpm).

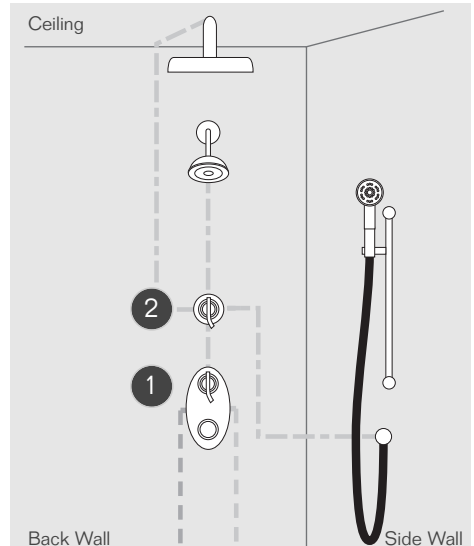

Danze®

Danze 1/2" Thermostatic Valve Setup

Our 1/2" thermostatic system is designed to provide a precise, consistent temperature and volume control throughout your shower experience, with a 4-port diverter directing water to each outlet.

Our 1/2" thermostatic mixing valve, combined with the 4-port diverter, can provide 8 gallons per minute at 45 psi to support up to 3 or 4 outlets. The images below illustrate a basic plumbing configuration. A diverter is not required to operate the Danze 1/2" thermostatic valve, but is commonly used to create a multi-component shower system.

- 1 Danze 1/2" thermostatic valve with trim
- 2 4-Port diverter with trim

Danze Pressure Balance

The Danze® pressure balance system controls water temperature by automatically adjusting the fluctuations to incoming water pressure. This system is ideal for a traditional single shower or tub/shower combination. When combined with a handshower and one of our multi-function showerheads, it allows you to take a traditional one outlet shower to a higher level. We offer three variations of our 1/2" pressure balance valve, including; with stops, with diverter and stops and less stops.

D115000BT

Our 1/2" pressure balance mixing valve can provide 6 gallons per minute at 45 psi to support up to 2 outlets. The images below illustrate the plumbing configuration of a 1/2" pressure balance shower system featuring a shower arm diverter, handheld shower and slide bar.

1* Shower arm diverter available January 2009.

Danze®

Danze Showerheads

From classic to contemporary and everything in between - Danze offers one of the industry's largest selections of showerheads. Select from multi and single function designs in a large array of styles and finishes.

Danze showerheads not only create a unique shower experience, they also complement your system with their styling and configurations. Our multi-function showerheads offer a choice of 3 spray patterns with a smooth and easy to grip adjustment ring.

6" 450 - D460007 (Double-Cone Spray)

6" 450 - D460007 (Drenching Aerated Spray)

6" 450 - D460007 (Pulsating Massage)

Showerhead spray settings can vary in three different options which include:

Double-Cone Spray

Drenching Aerated Spray

Pulsating Massage

Multi-Function Showerheads

Our 3-function showerheads provide another opportunity to personalize your custom shower experience. Choose double cone spray, drenching aerated streams or a relaxing, pulsating massage setting for a shower to match your mood... and a design to match your decor.
