IR Centac Centrifugal Compressor Filters

Air Intake Panels

JPL Compressors air intake filter panels meet and exceed OEM specifications. Primary filters are constructed with 98% of 10 micron efficiency synthetic media. This media is superior to the OEM specification in that if the panels get wet, due to sucking in snow or moisture, the panels can be dried and reused. The galvanized frames are of a heavier gauge and built to a higher standard offering more rigidity and stability. Our secondary panels come from the same source as the OEM offering the exact same specification at a lower price.

IR Centac Lubricant

TurboBlend™ Synthetic 32

ISO 32 Polyglycol/Ester Synthetic Compressor Lubricant

TurboBlend™ Synthetic 32 is a polyglycol/ester synthetic lubricant formulated to meet the demanding operating conditions like those found in the Ingersoll Rand Centac™ and other types of compressors. TurboBlend™ Synthetic 32 can be used in any screw or centrifugal compressor that requires an ISO 32 lubricant.

Independent tests show that our lubricant meets or exceeds the Ingersoll Rand Centac™ lubrication specification. Years of testing and real world use confirms that TurboBlend™ Synthetic 32 is an exceptional pour-in replacement for Techtrol Gold™ and Sullube 32™.

Compressor Lube Oil Filters

JPL Compressor Service offers a complete line of compressor oil filters. Our oil filters are manufactured with both resin impregnated cellulose and high performance microglass for superior dirt holding capacity. Our high quality oil filters meet or exceed all major OEM requirements.

Synthetic Compressor Lubricants

Today, high performance compressors operate at higher temperatures and within tighter tolerances than ever before. That means the fluids providing sealing, cooling and lubrication are called upon to meet more demanding requirements. Synthetic coolants are specifically designed to maintain peak performance in rotary screw compressors in spite of high operating temperatures.

Compressor Air Intake Filters

JPL Compressor Service offers a full line of air-intake filters designed to eliminate contaminants in the air taken in by a compressor. Utilizing both cellulose resin impregnated and synthetic polyester medias, our air filters reach a minimum efficiency of 99.0% and a low 0.5 inch of water resistance at the rated flow. These air filters are specially designed to provide optimal flow rate and dirt holding capacity while maintaining the specified air quality demands of compressed air. Constructed using paper or polyester, in both molded plastisol or metal ends, we offer a complete cross reference to all major compressor manufacturers.
