Installation Highlights

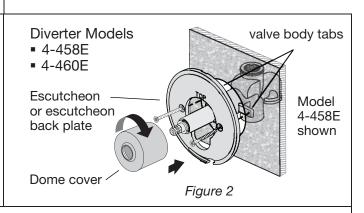

Note: These valves are diverter only valves that are used in combination with a mixing valve. They do not act as an ON/OFF and do not control the water temperature.

- 1. Flush the lines thoroughly before installation to ensure any debris is removed that could cause damage to the cartridge.
- 2. The inlet port is clearly marked with the letter **N** cast into the valve body.
- 3. Keep the plaster guard in place until the finished wall is complete.

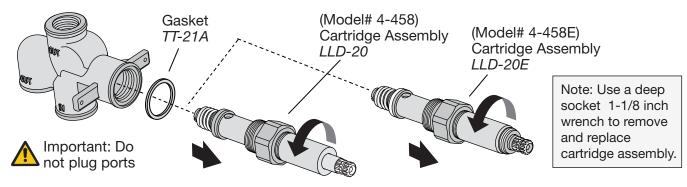

Service

- 1. Remove handle and dome cover or escutcheon attached to end of diverter valve.
- 2. Remove cartridge assembly by using a deep socket 27 mm wrench to loosen and unscrew brass hex nut.
- 3. Slide cartridge assembly out and remove gasket / O-ring from diverter body.
- 4. Gently slide replacement cartridge assembly and gasket / O-ring into diverter body.
- 5. Reassemble the valve by reversing the above removal instructions
- 6. Check system for leaks.
