

4 Years of Service!

Route 21 in Missouri is a 188-mile-long highway that is an important artery for Washington County residents commuting into St. Louis on a daily basis. The daily traffic count on this highway runs between 24,000 & 28,000 vehicles per day.

This section of pavement was experiencing the onset of alligator cracking. The Missouri Department of Transportation (DOT) was looking for a solution that would not require shutting down the highway but would successfully delay a full depth repair of the pavement. The DOT decided that American Road Patch™ would be the best solution.

Four years later through multiple seasons of snow, ice and traffic the patch is still performing and preventing additional cracking!
