**IMPORTANT!  
INSTALLER PLEASE NOTE:**

The grounding of electrical equipment such as telephone, computers, etc., to water lines is a common procedure. This grounding may be in the building or may occur away from the building. This grounding can cause electrical feedback into a water cooler, creating an electrolysis which causes a metallic taste or causes an increase in the metal content of the water. This condition is avoidable by using the proper materials as indicated below. The drain fittings which are provided by the installer should also be plastic to electrically isolate the cooler from the building plumbing system.

**OPERATION OF QUICK CONNECT FITTINGS**

Pushing tube in before pulling it out helps to release tube

**BOTTLE FILLER SPECIFICATIONS**

NOTE : New Installations Must Use Ground Fault Circuit Interrupter (GFCI).
